^ Assignment Overview

Choose a common theme (e.g., “curiosity” or “remote work” or “AI-augmented personalized learning”) and use multiple GenAI tools to generate different types of outputs:

- Write a short story using a language model
- Create an image using a text-to-image tool with that same story as the prompt
 - Feed the story into chatGPT and have it create a prompt for the imagen
- Generate a voiceover or song using an audio model
 - Again use chatGPT or built in coursera model to create a prompt for audio
- Generate creative image flash cards to help me study a topic on ____
- Optional: create a short video or animation

The goal is to see how the same idea transforms across text, image, and sound. As you compare your results, you will notice that each tool has its strengths and weaknesses. By the end, you will have a small collection of creative outputs and a better sense of which tools work best fordifferent typesof tasks.

For example:

Chatbot (Text Generation)*"I am a computer science student who is just starting to learn about generative AI. Write a short story about how I use an AI assistant to understand the difference between transformers and diffusion models in a simple, everydayexample."*

Text-to-Image Tool*"Create an illustration that shows a student studying computer science with the help of an AI assistant. The AI is visualized as a friendly guide surrounded by diagrams of neural networks, code snippets, and colorful datavisualizations."*

Audio Tool*"Generate a short podcast-style explanation where an AI tutor explains to a student what a transformer model is and why attention is important. The tone should be clear, encouraging, andbeginner-friendly."*

GenAI Tool Tracker

A quick-reference guide organized by generation modality. Updated regularly but the world of AI advances quicker than we can update these sources so some things may be outdated.

1. Text Generation (LLMs)

Tool	Best For	Free Tier (General Capabilities)	Paid Tier (General Capabilities)
ChatGPT (OpenAI) <Chatgpt.com>	Writing, reasoning, multimodal chat	• Access to a lightweight model • Shorter context window • Slower responses • Limited file/image analysis • Basic reasoning and coding	• Access to frontier models • Long context window • Faster responses + higher rate limits • Reliable file/image/audio analysis • Strong reasoning & coding performance
Claude (Anthropic) <Claude.ai>	Careful reasoning, long documents	• Smaller model • Short-to-medium context • Limited uploads	• High-accuracy model • Very long context window • Large uploads (PDFs, docs) • Strong analytical &

1. Write a short story using a language model. Copy the text from your language model and paste the output below.

1 / 1 point

Seventeen-year-old Noah was finishing homework late at night when his phone buzzed with a message from an unknown number saying, “Don’t look outside.” He laughed, assuming it was a prank, but then another message arrived: “I’m serious. Keep the curtains closed.” Suddenly uneasy, Noah stared at the dark window beside his desk. A third message appeared: “Someone is watching your house.” His curiosity got the better of him, and he carefully peeked through a gap in the curtains. Across the street, under a flickering streetlamp, stood a motionless figure staring directly at his house. Noah stepped back in shock and quickly typed, “Who is this?” The response came almost instantly: “That doesn’t matter. Hide now.” Before he could reply, a loud creak echoed from downstairs. His heart raced as he heard slow footsteps entering the house. Panicking, Noah hid inside his closet and clutched his phone. Another message appeared: “Stay quiet.” The footsteps climbed the stairs and stopped outside his bedroom door. For several terrifying seconds, there was complete silence before the door slowly opened. A shadow crossed the floor, and Noah held his breath, afraid even to blink. Finally, the footsteps retreated and the front door slammed shut. When everything was quiet again, Noah stepped out of the closet and looked around his room. Nothing seemed disturbed. His phone buzzed one last time. “Check your mirror.” With trembling hands, he turned around. Written across the mirror in black letters were the words: “Next time, don’t look outside.” Before Noah could react, the sender’s final message appeared: “You survived this version.” The screen instantly went black, and the mysterious number vanished forever.

2. Create an image using a text-to-image tool with that same story as the prompt

1 / 1 point

- Feed the story into chatGPT and have it create a prompt for the image.
- Write a summary of your findings below.

It is a great prompt focusing on key elements of the story. By just looking at the prompt I could imagine what image might look like once generated using LMArena and sure it did look very convincing.

3. Generate a voiceover or song using an audio model.

1 / 1 point

- Again, use chatGPT or another language model to create a prompt for audio.
- Write a summary of your findings below.

I have used Suno to generate voiceover and song. It created it with nice image thumbnail and really convincing image.
