

^ Assignment Overview

This quiz helps you sharpen your ability to recognize when an AI response may contain bias, outdated information, or other limitations. Each question presents an AI generated output that looks confident but includes a subtle issue. Your task is to identify what is going wrong and consider how you might guide the model toward a more accurate or balanced answer. Think of this as building your AI awareness so you can collaborate with these tools more responsibly. Treat this as a chance to build your “AI radar”, the ability to spot red flags and guide the system toward more accurate, responsible answers.

1. AI Output: “Albert Einstein won the Nobel Prize in Physics in 1931 for his theory of relativity.” 1 point

- ☐ The output contains a minor spelling mistake.
- ☐ The model has reached its context window limit.
- ☒ The model is hallucinating a fact that sounds plausible but is incorrect.
- ☐ The output is biased toward Western scientists.

2. AI Output:"Remote work is equally accessible to everyone and has eliminated workplace inequality." 1 point

Follow-up thought: How could you adjust your prompt to encourage a more balanced answer?

- ☐ The model’s temperature setting is too low.
- ☐ The model is hallucinating random information.
- ☐ The model is showing a context window error.
- ☒ The model is reflecting bias in its training data.

3. **AI Output:**"The latest version of GPT available to the public is GPT-3, released in 2020."

1 point

Follow-up thought: What kind of retrieval-based tool or strategy could you use to verify the current version?

- ☒ The model has a training cutoff and lacks newer information.
- ☐ The model is prioritizing bias over accuracy.
- ☐ The model is misinterpreting your question due to prompt phrasing.
- ☐ The model is experiencing a hallucination.

4. **AI Output:**"Nurses are caring women who support doctors during medical emergencies."

1 point

Follow-up thought: How could you rewrite the prompt to avoid this kind of bias?

- ☒ The output reflects outdated gender bias learned from training data.
- ☐ The model is hallucinating a fictional scenario.
- ☐ The model's context window is too small to include recent examples.
- ☐ The model's sampling parameters are too high.

5. **AI Output:**"According to studies, social media is bad for mental health."

1 point

Follow-up thought: What could you add to your prompt to encourage a more nuanced or evidence-based response?

- ☐ It is the result of a model trained only on social media data.
- ☐ It is an intentional simplification for clarity.
- ☐ It is an example of a hallucination caused by token limits.
- ☒ It lacks grounding and fails to reference credible sources.

Your grade: 100%

Your latest: 100% • Your highest: 100% • To pass you need at least 80%. We keep your highest score.

Assignment Overview

This quiz helps you sharpen your ability to recognize when an AI response may contain bias, outdated information, or other limitations. Each question presents an AI generated output that looks confident but includes a subtle issue. Your task is to identify what is going wrong and consider how you might guide the model toward a more accurate or balanced answer. Think of this as building your AI awareness so you can collaborate with these tools more responsibly. Treat this as a chance to build your “AI radar”, the ability to spot red flags and guide the system toward more accurate, responsible answers.

1.
- AI Output: “Albert Einstein won the Nobel Prize in Physics in 1931 for his theory of relativity.”
- 1 / 1 point

✓ Nice work

2.
- AI Output:"Remote work is equally accessible to everyone and has eliminated workplace inequality."
- 1 / 1 point

Follow-up thought:How could you adjust your prompt to encourage a more balanced answer?

✓ Nice work

3.
- AI Output:"The latest version of GPT available to the public is GPT-3, released in 2020."
- 1 / 1 point

Follow-up thought: What kind of retrieval-based tool or strategy could you use to verify the current version?

✓ Nice work

4. **AI Output:**"Nurses are caring women who support doctors during medical emergencies."

1 / 1 point

Follow-up thought: How could you rewrite the prompt to avoid this kind of bias?

✔ Nice work

5. **AI Output:**"According to studies, social media is bad for mental health."

1 / 1 point

Follow-up thought: What could you add to your prompt to encourage a more nuanced or evidence-based response?

✔ Nice work
